

FIȘA DISCIPLINEI

2023-2024

1. Date despre program

1.1 Instituția de învățământ superior	“Alexandru Ioan Cuza” University of Iași
1.2 Facultatea	Faculty of Physics
1.3 Departamentul	Physics
1.4 Domeniul de studii	Physics, Master
1.5 Ciclul de studii	Master
1.6 Programul de studii / Calificarea	Physics for Advanced Technologies

2. Date despre disciplină

2.1 Denumirea disciplinei	FUNDAMENTALS OF MATHEMATICAL PHYSICS						
2.2 Titularul activităților de curs	CONF. DR. HABIL. Iordana AȘTEFĂNOAEI						
2.3 Titularul activităților de seminar	conf. Dr. habil. Iordana AȘTEFĂNOAEI						
2.4 An de studiu	1	2.5 Semestru	1	2.6 Tip de evaluare	E	2.7 Regimul disciplinei*	OB

* OB – Obligatoriu / OP – Opțional

3. Timpul total estimat (ore pe semestru și activități didactice)

3.1 Număr de ore pe săptămână	4	din care: 3.2 curs	2	3.3 seminar/laborator	2
3.4 Total ore din planul de învățământ	56	din care: 3.5 curs	28	3.6 seminar/laborator	28
Distribuția fondului de timp					ore
Studiu după manual, suport de curs, bibliografie și altele					43
Documentare suplimentară în bibliotecă, pe platformele electronice de specialitate și pe teren					35
Pregătire seminarii/laboratoare, teme, referate, portofolii și eseuri					31
Tutoriat					0
Examinări					8
Alte activități					2
3.7 Total ore studiu individual					119
3.8 Total ore pe semestru					175
3.9 Număr de credite					7

4. Precondiții (dacă este cazul)

4.1 De curriculum	Mathematical Physics Equations, Differential Equations, Functional Analysis, Algebra.
4.2 De competențe	Computer skills, programming knowledge, English knowledge

5. Condiții (dacă este cazul)

5.1 De desfășurare a cursului	Online on Webex platform, computer, tablet
5.2 De desfășurare a seminarului	Online on Webex platform, computer, tablet

6. Competențe specifice acumulate

Competențe profesionale	C1. identification and proper use of laws, principles, notions and physical methods in various circumstances; C2. analysis and communication of physics information with didactical, scientific and popularization character; C3. capacity of interrelating and teamworking; C4. application of Physics knowledge to practical situations; C5. opening to lifelong learning.
Competențe transversale	CT1. mastery of research methods and techniques, specific to the Master specialization CT2. language skills at academic level, in foreign languages, needed for scientific documentation; CT3. use of communication and information technologies; CT4. use the software for analyzing and processing experimental data and to perform virtual experiments; CT5. understanding and ability to apply the principles and the values of the professional and research ethics.

7. Obiectivele disciplinei (din grila competențelor specifice acumulate)

7.1 Obiectivul general	The present course intends to supply good knowledge on basics and main results of mathematical physics. By its role, this course should prepare the student for a Ph.D. in Physics. Therefore, the modern views and the checked formalisms are constantly emphasized as far as possible.
7.2 Obiectivele specifice	<ul style="list-style-type: none">▪ Ability to use theoretical physics methods in various fields;▪ application of knowledge to practical situations;▪ Ability in extracting information from a large variety of sources.▪ Use of specific software for analyzing and processing experimental data;

8. Conținut

8.1	Curs	Metode de predare Onsite/Online	Observații (ore și referințe bibliografice)
1.	Generalities on differential equations;	Lecture, Applications Onsite	2 ore
2.	Physically significant differential equations;	Lecture, applications, guided discovering process Onsite	2 ore
3.	Ordinary differential equations; First and Second order differential equations	Lecture, applications, guided discovering process Onsite	2 ore
4.	Ordinary differential equations; Higher Order Differential equations	Lecture, debate, guided discovering process Onsite	2 ore
5.	Euler equations. Cauchy-Euler equations	Lecture, applications Onsite	2 ore

6	Systems of first order differential equations;	Lecture, guided discovering process, applications Onsite	2 ore
7	First order differential equations with partial derivatives;	Lecture, guided discovering process, applications Onsite	2 ore
8.	Second order differential equations with partial derivatives;	Lecture, guided discovering process, applications Onsite	2 ore
9	Legendre Polynomials;	Lecture, guided discovering process, applications Onsite	2 ore
10	Basic symmetries and special functions: spherical and Bessel functions;	Lecture, guided discovering process, applications Onsite	2 ore
11.	Laplace and Poisson Equations,	Lecture, guided discovering process, applications Onsite	2 ore
12.	Laplace – Fourier method of variables separation;	Lecture, guided discovering process, applications Onsite	2 ore
13.	Parabolic equations: General physical processes, Heat propagation equation, solutions and Laplace-Fourier method, heat propagation equation in entire space, fundamental solution of heat propagation operator.	Lecture, guided discovering process, applications Online	2 ore
14.	Hyperbolic equations: physical general processes, Wave equation and standard conditions, Laplace-Fourier method and types of solutions, Propagation in R^3 : radiation conditions.	Lecture, guided discovering process, applications Onsite	2 ore

4. Precondiții (dacă este cazul)

4.1 De curriculum	Electricity and Magnetism, Solid State Physics
4.2 De competențe	Interdisciplinary scientific and technological general background, Positive team working attitude and competences in science communication

5. Condiții (dacă este cazul)

5.1 De desfășurare a cursului	Lecture room with multimedia tools (projector, screen) and blackboard, Acces internet, CISCO Webex platform, Skype, etc.
5.2 De desfășurare a seminarului/ laboratorului	Labs with specific equipments/tools for the characterisation of electrical and magnetic properties of materials with technological applications, Acces internet, CISCO Webex platform, Skype, etc.

6. Competențe specifice acumulate

Competențe profesionale	<p>C1. Capacitaty to identify properly in practical situations the principles, laws, models and theories to describe the electrical and magnetic properties of materials in correlation with composition and microstructures;</p> <p>C2. Capacitaty to identify, classify and describe materials from the point of view of their behaviour under electric/magnetic fields and understanding their potential for possible applications;</p> <p>C3. Capacity to analyse and valorify the experimental results obtained in the lab and identification of error sources and influence of various parameters;</p> <p>C4. Capacitaty to study recommended bibliography, to synthesise scientific information and critically discuss models for interpretation of materials properties with possible technological and industrial applications.</p>
Competențe transversale	<p>CT1. Capacity of communication concerning scientific results, ability to realise a scientific presentation concerning materials with technological applications;</p> <p>CT2. Capacity of collaboration and working in a team;</p> <p>CT3. Capacity to realise a personal project of bibliographical or scientific research;</p> <p>CT4. Open and positive attitude for solving problems and assuming the professional deontological principles and values.</p>

7. Obiectivele disciplinei (din grila competențelor specifice acumulate)

7.1 Obiectivul general	Understanding the electrical and magnetic properties of substances and their correlation with chemical and phase composition and with micro/nanostructural characteristics
7.2 Obiectivele specifice	<p>After successfully finalising this discipline, the students will be able to:</p> <ul style="list-style-type: none"> ▪ Explain the differences between the functional properties of various materials with technological applications with linear/nonlinear response under the application of electric/magnetic fields; ▪ Describe the material response in electric/magnetic field as a function of temperature field frequency, field intensity, mechanical stress; ▪ Use various experimental methods to characterise materials with technological applications from electric/magnetic point of view; ▪ Comparatively analyse the materials properties, searching for potential applications; ▪ Use adequate models for interpretation of polarisation/magnetisation processes in substances.

8. Conținut

8.1	Curs	Metode de predare	Observații (ore și referințe bibliografice)
1.	Eqs. describing the electric field in materials. Dipole, multipole. General properties of dielectrics, classifications.	Lecture, Power Point presentation	2h
2.	Polarization. Fundamental eq. of dielectrics. Applications: dielectric plan, sphere. Local fields (Lorentz, Onsager)	Lecture, Power Point presentation. Case study	2h

3.	Electrostatic forces and energies in substances.	Lecture, Power Point presentation	2h
4.	Induced polarisation. Field-dependence of polarisation and susceptibility in non-polar substances.	Lecture, Power Point presentation	2h
5.	Orientation polarisation. Field-dependence of polarisation and susceptibility in polar substances.	Lecture, Power Point presentation	2h
6.	Dielectric relaxation, empirical laws. Debye relaxation. Microscopical mechanisms.	Lecture, Power Point presentation. Case study	2h
7.	Impedance spectroscopy: principles, methods, applications to determine broadband dielectric properties.	Lecture, Power Point presentation. Case study	2h
8.	Fundamental laws of magnetism in substances. Origin of magnetic properties.	Magistral lecture. Case study	2h
9.	Diamagnetism, paramagnetism, ferromagnetism: phenomenological aspects. Hysteresis loop; permeability and magnetic susceptibility.	Lecture. Debates. Case study	2h
10.	Magnetization of substances in ac fields. Magnetic interactions. Temperature-induced modification of magnetisation curves. Curie temperature.	Lecture. Debates. Case study	2h
11.	Nature of magnetic moments in ferromagnetic solids. Weiss model. Other theories for polarisable media. Theory of magnetisation curves.	Lecture. Computer-aided learning.	2h
12.	Soft magnetic materials. Hard magnetic materials.	Lecture. Debates. Case study	2h
13.	Nanostructured magnetic materials. Thin film magnetic materials.	Magistral lecture	2h
14.	Applications of magnetic materials. Recording/storage media.	Lecture. Case study. Brainstorming	2h

9. Coroborarea conținutului disciplinei cu așteptările reprezentanților comunității, asociațiilor

**profesionale și angajatorilor reprezentativi din domeniul aferent programului**

The objectives and contents have been selected according to the expectations of the main employers (research institutes, universities, SMEs, schools) in order to favour the professional insertion. The discipline is adapted to the recommendation of ANCS (National Research Agency) and Physics Romanian Society.

10. Evaluare

Tip activitate	10.1 Criterii de evaluare	10.2 Metode de evaluare	10.3 Pondere în nota finală (%)
10.4 Lecture	Presence, implication, constructive feedback	Written test. Individual project. Written report.	75%
10.5 Seminar/ Laboratory	Implication, preparation of activities, quality of contributions, assuming charges and activities in workteam, collaboration in the workgroup	Individual project, lab portfolio, participation to seminars, solved problems, individual and group tasks	25%
10.6 Standard minim de performanță			
The students should demonstrate their ability to discuss using specific scientific language about the electric/magnetic properties of various materials with technological applications. The students will be able to realise at least an individual mini-project of bibliographic or scientific research and to present it to the community in a coherent way.

4. Precondiții (dacă este cazul)

4.1 De curriculum	Undergraduate course in programming languages
4.2 De competențe	Basic computer skills

5. Condiții (dacă este cazul)

5.1 De desfășurare a cursului	Room with access to internet, videoprojector and projection screen. Individual access to computers for students.
5.2 De desfășurare a seminarului/ laboratorului	Room with access to internet, videoprojector and projection screen. Individual access to computers for students.

6. Competențe specifice acumulate

Competențe profesionale	C1.1 Mastery of research methods and techniques, specific to the specialization Advanced Materials. Nanotechnologies; C2.1 Language skills at academic level, in foreign languages, needed for scientific documentation; C3.1 Use of communication and information technologies; C4.1 Use the software for analyzing and processing experimental data and to perform virtual experiments;
Competențe transversale	CT1. Use of communication and information technologies; CT2. Use the software for analyzing and processing experimental data and to perform virtual experiments; CT3. Understanding and ability to apply the principles and the values of the professional and research ethics.

7. Obiectivele disciplinei (din grila competențelor specifice acumulate)

7.1 Obiectivul general	C1. Identification and proper use of laws, principles, notions and physical methods in various circumstances; C2. Analysis and communication of Physics information C3. Capacity to teach Physics at secondary and post-secondary education levels; C4. Application of Physics knowledge to practical situations; C5. Opening to lifelong learning.
7.2 Obiectivele specifice	After successfully finalizing this course, the students will be able to: <ul style="list-style-type: none">Use computing modeling tools to describe physics problemsIdentify and control sources of numerical errorsAnalyze numerical results and establish conclusions starting from numerical simulations

8. Conținut

8.1	Curs	Metode de predare	Observații (ore și referințe bibliografice)
1	Generalities. Systems, models and simulations. Errors in numerical calculus: the machine constant and the floating point round-off error.	Lecture, exemplification	2
2	Maple/Maxima programming platform and Python languages: how are they comparing to other programming environments, advantages and disadvantages.	Lecture, exemplification	2
3	The trajectory of a body in a 2D gravitational field: <ul style="list-style-type: none">- plotting the parametric trajectory starting from known solutions,- finding solutions by solving the equation of motion,- the consequences of adding viscous friction	Lecture, exemplification	2
4	Finding the trajectory of a body in gravitational field – wind effect (numerically solving the equation of motion).	Lecture, exemplification	2

	Movement in central force field.		
5	Computing and graphical representation of fields. Electrical field of a system of electric charges. The field lines spectrum of a system of two electric charges.	Lecture, exemplification	2
6	Advanced computing of field lines - plotting electric field lines for an arbitrary number of electric charges.	Lecture, exemplification	2
7	Harmonic oscillator. Different ways of approaching animations in Maple/Maxima.	Lecture, exemplification	2
8	Discussing the solution of the practical work problem. Lissajous curves	Lecture, exemplification	2
9	More advanced programming in Maple/Maxima – plotting the resonance curve	Lecture, exemplification	2
10	More advanced programming in Maple/Maxima – animating a falling satellite	Lecture, exemplification	2
11	Working with external data in Maple/Maxima: read, write, statistics.	Lecture, exemplification	2
12	Nonlinear systems: the double pendulum. Random vs. chaotic vs. deterministic.	Lecture, exemplification	2
13 - 14	Analyzing chaos: Lyapunov exponents, phase portraits, Poincare sections.	Lecture, exemplification	4

2.1 Denumirea disciplinei	VIRTUAL INSTRUMENTATION						
2.2 Titularul activităților de curs	Lect. Dr. Cătălin AGHEORGHIESEI						
2.3 Titularul activităților de seminar	Lect. Dr. Cătălin AGHEORGHIESEI						
2.4 An de studiu	1	2.5 Semestru	1	2.6 Tip de evaluare	E	2.7 Regimul disciplinei*	CO

* OB – Obligatoriu / OP – Opțional

3. Timpul total estimat (ore pe semestru și activități didactice)

3.1 Număr de ore pe săptămână	4	din care: 3.2 curs	2	3.3 seminar/laborator	2
3.4 Total ore din planul de învățământ	56	din care: 3.5 curs	28	3.6 seminar/laborator	28
Distribuția fondului de timp					ore
Studiu după manual, suport de curs, bibliografie și altele					45
Documentare suplimentară în bibliotecă, pe platformele electronice de specialitate și pe teren					34
Pregătire seminarii/laboratoare, teme, referate, portofolii și eseuri					20
Tutoriat					6
Examinări					4
Alte activități Proiect individual					10
3.7 Total ore studiu individual					119
3.8 Total ore pe semestru					175
3.9 Număr de credite					7

4. Precondiții (dacă este cazul)

4.1 De curriculum	Electricity and magnetism, Electronics, Computer programming
4.2 De competențe	- basics of proper use of laboratory and research instruments - basics of electric and electronic circuits

5. Condiții (dacă este cazul)

5.1 De desfășurare a cursului	Classroom equipped with: screen, projector, computer
5.2 De desfășurare a seminarului/ laboratorului	Laboratory room equipped with scientific equipment and related consumables: acquisition boards, software LabVIEW, oscilloscope, power programmable sources

6. Competențe specifice acumulate

Competențe profesionale	C1. identification and proper use of laws, principles, notions and physical methods in various circumstances; C2. analysis and communication of Physics information with didactical, scientific and popularization character; C3. capacity to teach Physics at secondary and post-secondary education levels; C4. capacity of interrelating and team working; C5. application of Physics knowledge to practical situations; C6. opening to lifelong learning.
Competențe transversale	CT1. mastery of research methods and techniques, specific to the specialization Biophysics and Medical Physics; CT2. language skills at academic level, in foreign languages, needed for scientific documentation; CT3. use of communication and information technologies; CT4. use the software for analyzing and processing experimental data and to perform virtual experiments; CT5. understanding and ability to apply the principles and the values of the professional and research ethics

7. Obiectivele disciplinei (din grila competențelor specifice acumulate)

7.1 Obiectivul general	Knowledge of the analog and digital experimental measuring methods;
7.2 Obiectivele specifice	On successful completion of this subject, students will be able to: 1. Understanding of the data acquisition system; 2. Ability to analyze and design an virtual acquisition systems of different experimental devices; 3. Awareness of the typical problems in virtual instrumentation, according to the mainstream scientific literature of the last decade

8. Conținut

8.1	Curs	Metode de predare	Observații (ore și referințe bibliografice)
1.	Introduction	Lectures, problems solving	2hours, Refs. 1-6
2.	I. Measuring and control experimental systems – analog systems	Lectures, problems solving	2hours, Refs. 1,2,5
3.	I. Measuring and control experimental systems – digital systems	Lectures, problems solving	2hours, Refs 1,2,5
4.	II. Data acquisition – Data acquisition board	Lectures, problems solving	2hours, Refs 1,2,5
5.	II. Data acquisition – Serial port RS-232, USB	Lectures, problems solving	2hours, Refs 1,2,5

6.	II. Data acquisition – Parallel port IEEE-1284	Lectures, problems solving	2hours, Refs 1,2,5
7.	II. Data acquisition – GPIB port IEEE 488.2	Lectures, problems solving	2hours, Refs 1,2,5
8.	III. Virtual instrumentation programming in LabVIEW – Introduction (front panel, block diagram)	Lectures, problems solving	2hours, Refs 3,4,6
9.	III. Virtual instrumentation programming in LabVIEW – Data types and operators	Lectures, problems solving	2hours, Refs 3,4,6
10.	III. Virtual instrumentation programming in LabVIEW – LabVIEW commands	Lectures, problems solving	2hours, Refs 3,4,6
11.	III. Virtual instrumentation programming in LabVIEW – Graphics in LabVIEW	Lectures, problems solving	2hours, Refs 3,4,6
12.	III. Virtual instrumentation programming in LabVIEW – Design Virtual Instruments in LabVIEW	Lectures, problems solving	2hours, Refs 3,4,6
13.	III. Virtual instrumentation programming in LabVIEW – Advanced Topics	Lectures, problems solving	2hours, Refs 3,4,6
14.	Reviews in Virtual Instrumentation	Lectures, problems solving	2hours, Refs 3,4,6

9. Coroborarea conținutului disciplinei cu așteptările reprezentanților comunității, asociațiilor profesionale și angajatorilor reprezentativi din domeniul aferent programului

Course content is consistent with the virtual instrumentation techniques used in scientific and research laboratories in the country and abroad.

10. Evaluare

Tip activitate	10.1 Criterii de evaluare	10.2 Metode de evaluare	10.3 Pondere în nota finală (%)
10.4 Curs	active participation in the class activities	Final exam	50
10.5 Seminar/ Laborator	active participation to labs activities	Weekly monitoring of the projects progress, final presentation of the project on the chosen topic	50
10.6 Standard minim de performanță			
Independent analysis of a typical design for virtual instrumentation, using LabVIEW programming

**FIȘA DISCIPLINEI****2023-2024****1. Date despre program**

1.1 Instituția de învățământ superior	Universitatea “Alexandru Ioan Cuza” din Iași
1.2 Facultatea	Faculty of Physics
1.3 Departamentul	Physics
1.4 Domeniul de studii	Physics
1.5 Ciclul de studii	Master
1.6 Programul de studii / Calificarea	PHYSICS FOR ADVANCED TECHNOLOGIES

2. Date despre disciplină

2.1 Denumirea disciplinei	Optical Spectroscopy: methods and instrumentation						
2.2 Titularul activităților de curs	Conf. dr. Valentin POHOAȚĂ						
2.3 Titularul activităților de seminar	Conf. dr. Valentin POHOAȚĂ						
2.4 An de studiu	2	2.5 Semestru	1	2.6 Tip de evaluare	EVP	2.7 Regimul disciplinei*	OP

* OB – Obligatoriu / OP – Opțional

3. Timpul total estimat (ore pe semestru și activități didactice)

3.1 Număr de ore pe săptămână	4	din care: 3.2 curs	2	3.3 seminar/laborator	2
3.4 Total ore din planul de învățământ	56	din care: 3.5 curs	28	3.6 seminar/laborator	28
Distribuția fondului de timp					ore
Studii după manual, suport de curs, bibliografie și altele					25
Documentare suplimentară în bibliotecă, pe platformele electronice de specialitate și pe teren					15
Pregătire seminarii/laboratoare, teme, referate, portofolii și eseuri					4
Tutoriat					6
Examinări					4
Alte activități					
3.7 Total ore studiu individual					69
3.8 Total ore pe semestru					125
3.9 Număr de credite					5

4. Precondiții (dacă este cazul)

4.1 De curriculum	Optics. Physics of atoms and molecules. Plasma Physics. Spectroscopy and Lasers.
4.2 De competențe	

5. Condiții (dacă este cazul)

5.1 De desfășurare a cursului	
5.2 De desfășurare a seminarului/ laboratorului	Presence is mandatory at practical laboratories. Students will conduct individual or group laboratory experiments.

6. Competențe specifice acumulate

Competențe profesionale	Identification and proper use of laws, principles, notions and physical methods in various circumstances Analysis and communication of Physics information with didactical, scientific and popularization character Capacity to teach Physics at secondary and post-secondary education levels Capacity of interrelating and teamworking Application of Physics knowledge to practical situations Opening to lifelong learning
Competențe transversale	Mastery of research methods and techniques, specific to the specialization Plasma Physics, Spectroscopy and Self-Organization Language skills at academic level, in foreign languages, needed for scientific documentation Use of communication and information technologies Use the software for analyzing and processing experimental data and to perform virtual experiments Understanding and ability to apply the principles and the values of the professional and research ethics

7. Obiectivele disciplinei (din grila competențelor specifice acumulate)

7.1 Obiectivul general	Familiarization with the major spectroscopic tools and research techniques used in the analysis and control of composition, structure and quality of the materials. The course will review the main techniques and spectral methods of investigation, spectral types of appliances, basic components, sources and spectrum detectors.
7.2 Obiectivele specifice	<ul style="list-style-type: none">On successful completion of this subject, students will be able to understand what spectral techniques are indicated for both qualitative and quantitative diagnosis of samples in different states of aggregation.

8. Conținut

8.1	Curs On-line și On-site	Metode de predare	Observații (ore și referințe bibliografice)
1.	Vibrational Spectroscopy. Infrared spectroscopy. Classical acquisitions techniques (pallets, gas and liquid cell, nujol emulsion)	Lecture, thematic debates, applications.	4 h [1-9]
2.	Vibrational Spectroscopy. Infrared spectroscopy. New acquisitions techniques (ATR, diffuse reflectance)	Lecture, thematic debates, applications.	2 h [1-9]
3.	Elastic light scattering – Rayleigh scattering, Mie scattering, non-selective scattering or geometrical scattering.	Lecture, thematic debates, applications.	2 h [1-9]
4.	Inelastic scattering- Raman scattering.	Lecture, thematic debates, applications.	2 h [1-9]
5.	Molecular Spectroscopy - Visible and Ultraviolet Spectroscopy	Lecture, thematic debates, applications.	2 h [1-9]

6.	Components of various types of instrument for optical spectroscopy. instrumentation – spectrophotometer, monochromator, double beam scanning spectrophotometer, artefacts.	Lecture, thematic debates, applications.	4 h [1-9]
7.	Fluorescence spectroscopy	Lecture, thematic debates, applications.	2 h [1-9]
8.	X-Ray Fluorescence	Lecture, thematic debates, applications.	2 h [1-9]
9.	Nuclear Magnetic Resonance Spectroscopy.	Lecture, thematic debates, applications.	2 h [1-9]
10.	Laser-induced spectroscopy. Atomic emission spectroscopy, molecular, UV-VIS-IR. Atomic fluorescence spectroscopy. FTIR and Raman vibrational spectroscopy.	Lecture, thematic debates, applications.	2 h [1-9]
11	Laser induced fluorescence. Broadenings mechanisms, shifts and splits. (Doppler, Stark, Zeeman, van der Waals, resonance broadenings of spectral lines)	Lecture, thematic debates, applications.	2 h [1-9]
12.	Mass Spectrometry. Types of Mass Spectrometers. Inductively coupled plasma mass spectrometry (ICP-MS). Gas Chromatography—Mass Spectrometry (GC-MS). Matrix Assisted Laser Desorption/Ionization MALDI	Lecture, thematic debates, applications.	2 h [10,11]
